イロト 不得 トイヨト イヨト

Polynomial improvement of the upper bound of $\Delta(x, P)$

Szemeredi's theorem

If *H* is an abelian group with *n* elements and *A* is a subset of *H* with no length three arithmetic progressions then we can construct a graph G = (V, E) that has 3n vertices and |A|.n pairwise edge disjoint triangles and no other triangles.

Behrend's theorem

Behrend showed that $\mathbb{Z}/n\mathbb{Z}$, *n* prime, has a subset *A* that contains no length three arithmatic progression and whose size is $n/e^{O(\sqrt{\log n})}$

• Combining this two results it is possible to construct a graph with 3n vertices and $n^2/e^{O(\sqrt{\log n})}$ edge disjoint triangles and no other triangles.

B. B. Bhattacharya, S. Das, Sk S. Islam, S.Sen

Polynomial improvement of the upper bound of $\Delta(x, P)$

Behrend's construction:

Suppose *n* is an odd prime and $A \subseteq \mathbb{Z}/n\mathbb{Z}$ is a set with no 3-term arithmetic progression. The Behrend's graph G(n, A) is a tripartite graph with vertices on each side of the tripartition numbered $\{0, 1, \ldots, n-1\}$ and triangles of the form (z, z + a, z + 2a) modulo *n*, for $z \in \{0, 1, \ldots, n-1\}$ and $a \in A$.

• It is easy to check that the graph G(n, A) has 3n vertices 3|A|n edges and each edge belongs to a unique triangle.

Polynomial improvement of the upper bound of $\Delta(x, P)$

Claim 2

All 3 edges of any triangle in ${\cal T}$ cannot be shared by other triangles in ${\cal T}.$

B. B. Bhattacharya, S. Das, Sk S. Islam, S.Sen

イロト イポト イヨト イヨト

Polynomial improvement of the upper bound of $\Delta(x, P)$

- To get V_P(x) = 9 and I_P(x) = 6 each edge of all triangles in T must be shared by more than one triangles of T
- By Claim 1 and Claim 2, Paley graph with 9 vertices, 18 edges, and 6 triangles is not geometrically realizable.

B. B. Bhattacharya, S. Das, Sk S. Islam, S.Sen

In this paper, we initiate the study of the growth rate of the number of empty triangles in the plane, by proving upper and lower bounds on the difference Δ(x, P).

イロン イロン イヨン イヨン

- In this paper, we initiate the study of the growth rate of the number of empty triangles in the plane, by proving upper and lower bounds on the difference Δ(x, P).
- We relate the upper bound to the well-known Ruzsa-Szemerédi problem and study geometric properties of the triangle incidence graph G_P(x).
